EXPERIMENT 04

Data Modelling and Form Design for a Business Application in Zoho Creator

Library Book Issue Request Form (Basic Fields Use Case)

RAMANATHAN S

1. Aim

To design a data model and build a business application form in Zoho Creator for managing library book issue requests, and to demonstrate the creation of form fields, the linking of related forms, and the generation of report data from submitted records.

2. Data Model & Procedure

The application uses two related forms: **Member Profile** and **Book Issue Request**, connected through a lookup relationship (Member field) allowing a one-to-many relationship where a single member can raise multiple requests.

Procedure Steps:
1. Created a new application titled 'Library Book Issue Management'.
2. Created the 'Member Profile' form (Member Name, Register/Roll Number, Member Type, Email Address, Contact Number, Hostel/Residential Address).
3. Created the 'Book Issue Request' form with a lookup relationship to Member Profile.
4. Added remaining fields: Book Category, Subject Areas Of Interest, Number Of Copies, Purpose Of Borrowing, Preferred Issue Date, Preferred Collection Time, Agree To Library Rules, Request Status, and Processed By.
5. Configured field properties, validations, and PII data privacy settings.
6. Filled out and submitted sample records, verifying data capture in the corresponding report.

3. Form Schema Summary

Form Name	Key Fields	Purpose
Member Profile	Member Name, Register/Roll Number, Member Type, Email Address, Contact Number, Hostel/Residential Address	Store member details
Book Issue Request	Member (lookup), Book Category, Subject Areas Of Interest, Number Of Copies, Purpose Of Request, Preferred Issue D	Capture book request details

4. Conclusion

A data model with two related forms, Member Profile and Book Issue Request, was successfully designed in Zoho Creator. The Book_Issue_Request_Form was built with appropriate field types and validations, tested by submitting sample data, and verified in the corresponding report.
